COMPANY IN MEDICAL

We are

We are only a company that sells genuine products.
We are doing both wholesale and retail.
We are trying to make sure that more people can use
Korean cosmetics as they become a global sensation.

In the future, We will continue to make efforts to advance to
the advanced market and do its
best to become a proud company and a proud representative.

We promise that we will continue to work hard to
improving your beauty and quality of life.

Thank you.

A close-up photograph of a person's face, focusing on their lips which are coated in a vibrant red lipstick. The image is partially obscured by a large, semi-transparent circular graphic that overlaps with the text on the right. The overall aesthetic is clean and professional, typical of a cosmetic or medical product advertisement.

V CIRCLE are the Korean company
that aims to export
medical supplies such as cosmetics
and fillers all over the world

Collagen is

● Collagen is the main protein in all connective tissues, including the skin, blood vessels, bones, teeth, and muscles.

● The supply of pure collagen for healthy skin maintains a youthful complexion with radiance and elasticity, promoting the generation of new skin cells and activating metabolism.

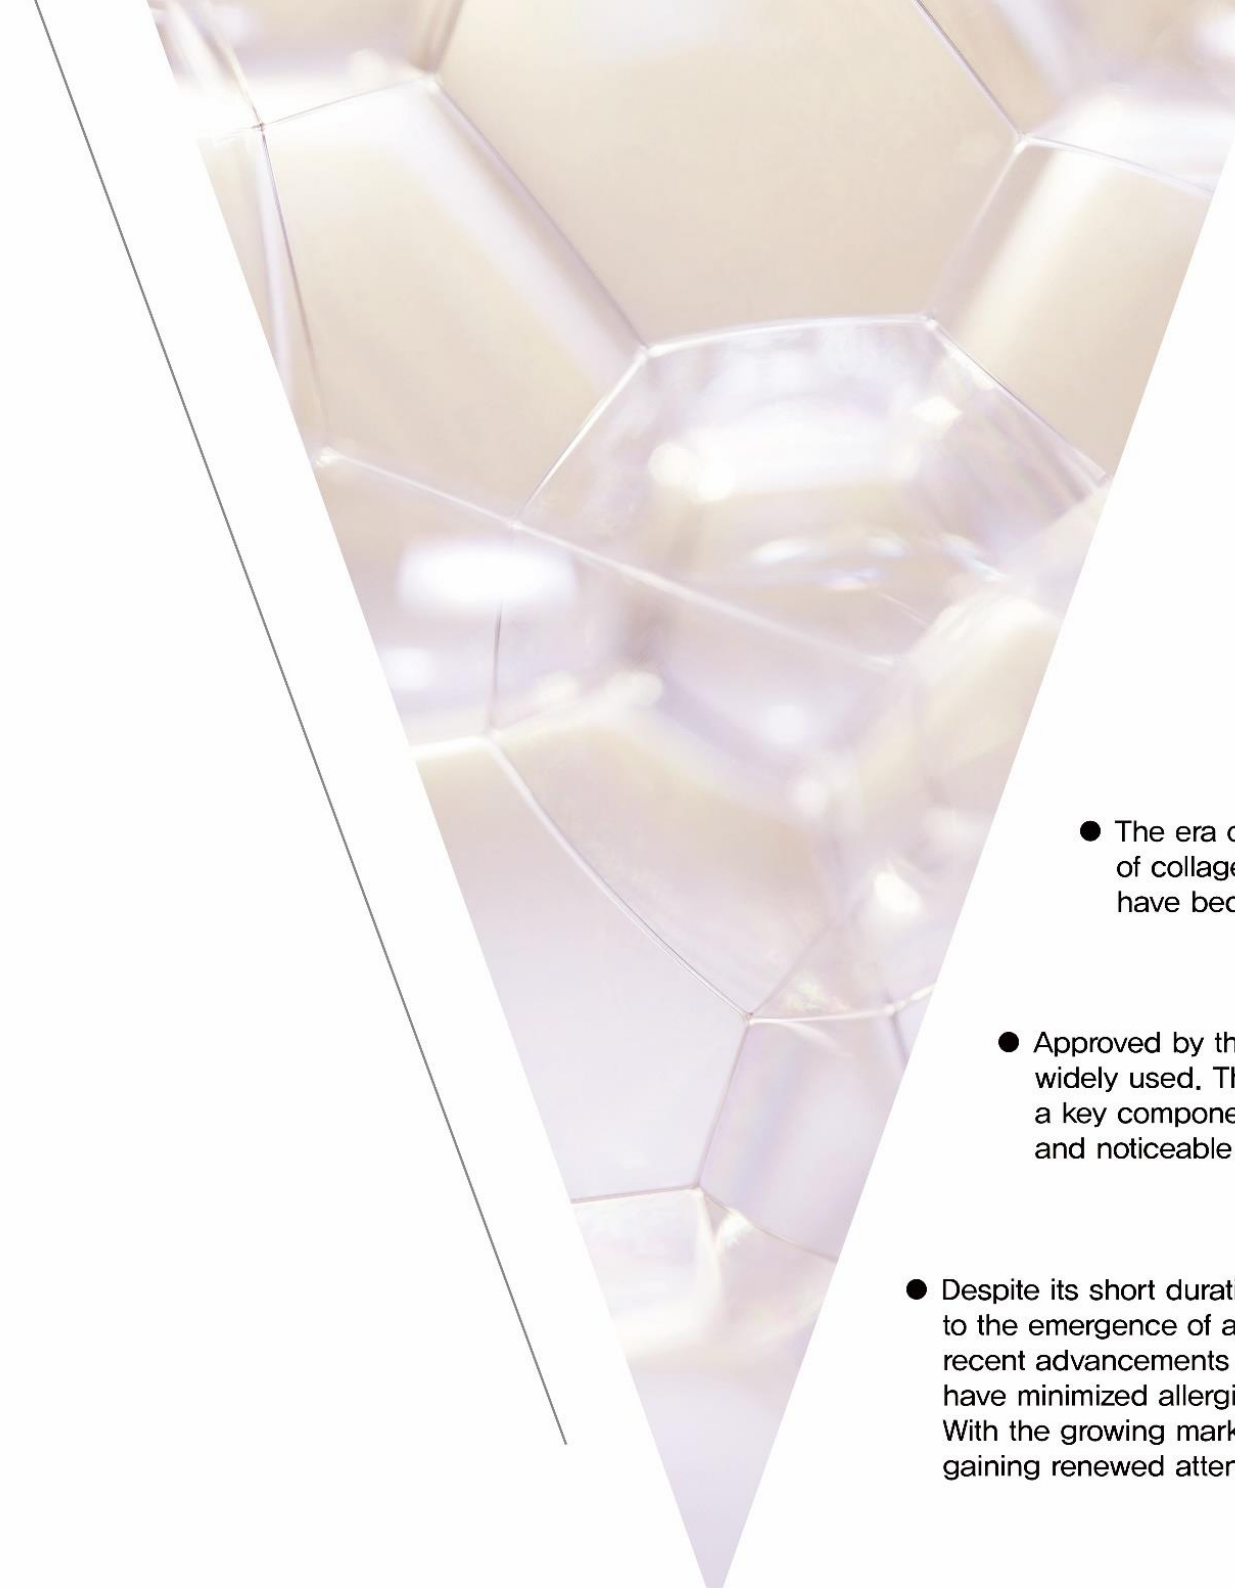

● In the skin, the primary effects of collagen include firming the cells and connecting them tightly, preventing wrinkles, and enhancing the elasticity and smoothness of blood vessels, thereby strengthening the functions of organs.

History of Collagen

animal collagen filler

- The era of authentic fillers began with the introduction of collagen fillers in 1981. Today, injectable fillers have become widely popular, playing a significant role.
- Approved by the FDA in June 2008, collagen fillers have since been widely used. The advantage lies in the direct injection of collagen, a key component of the skin, allowing for rapid and noticeable effects in a short period.
- Despite its short duration of 3–6 months and a market contraction due to the emergence of allergy reactions and the introduction of HA fillers, recent advancements in atelocollagen purification technology have minimized allergic reactions. With the growing market for skin boosters, atelocollagen is gaining renewed attention for its ability to deliver immediate effects.

collagen

Advantages of Elizabeth Collagen.1

1. Volume Formation (Collagen Supplementation) Filling the loosened collagen within the dermal layer through immediate injection to create volume.
2. Restoring Skin Elasticity (Promotion of Collagen Regeneration)
Not only directly replenishing collagen but also facilitating the self-regeneration of the original collagen within the skin. This occurs as the injected atelocollagen product attracts and stimulates the surrounding collagen tissues.
3. Improving Skin Tone and Increasing ECM (Extracellular Matrix)
The effect of gathering surrounding cellular tissues not only promotes collagen regeneration but also activates the generation and metabolism of various other skin cells (such as hyaluronic acid, elastin, growth factors). As a result, overall skin tone is improved.

Advantages of Elizabeth Collagen.2

4. collagen+PRP

Injecting collagen and undergoing PRP (Platelet-Rich Plasma) treatment together can maximize the effects, often referred to as "witch's shot." This is because collagen effectively activates various growth factors present in PRP.

5. Inhibition of Pigment Formation

As the breakdown components of collagen are amino acids, it effectively inhibits the activity of the skin pigment enzyme tyrosinase. This helps improve melanin pigmentation from the root of the skin.

6. Naturally Formed Volume

Immediate volume formation upon injection, with approximately 60% remaining after one month, while 40% is absorbed by the body. During this process, there might be a slight reduction in volume, but the 40% absorbed consists of moisture components present in atelocollagen. The primary ingredient, atelocollagen, does not disappear entirely.

collagen

Advantages of Elizabeth Collagen.3

7. long-lasting duration

The effects of injected atelocollagen gradually become apparent after one month, promoting the regeneration of surrounding collagen tissues and supplying moisture and nutrients to the skin's epidermal layer. These effects are remarkably long-lasting, typically maintained for approximately 1 year to 1.5 years.

8. domestically sourced high-purity raw material

Atelocollagen is a domestically produced high-purity raw material, utilizing advanced purification technology to minimize allergic reactions. It is a high-quality product effective in the natural formation of collagen and the increase of the intrinsic extracellular matrix (ECM). Particularly, it is a product with secured safety and stability, used for therapeutic purposes such as treating tendons, muscles, ligaments, and fascia domestically."

Elizabeth Collagen is an absorbable high purity collagen with a minimized immune reaction

Elizabeth Collagen procedure methods and effects

- Cell Proliferation
- Activation of Cellular Metabolism
- Stimulation of Endogenous Collagen Production

1st • Skin Elasticity Recovery

Promoting collagen regeneration

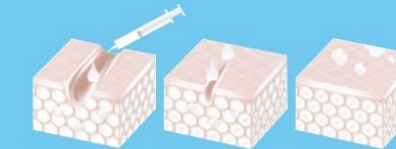

Attracts surrounding collagen tissues.

- Immediate Moisture Infusion
- Enhanced Extracellular Matrix (ECM)

2nd • Skin Tone Improvement

Activates metabolism of collagen regeneration

2nd

3rd • Long Lasting Period

About 1 to 1.5 years

- Collagen Matrix Reconstruction
- Vigorous Skin Regeneration
- Volume Augmentation

Elizabeth Collagen Mix Protocols

- PRP 2cc + Collagen 1cc Total 3cc
- Apply numbing cream 30 minutes before the procedure.

- Using a centrifuge to mix PRP (Platelet-Rich Plasma) and collagen.

- Inject manually at 1 cm intervals in the SUB-Q layer of the treatment area.

Collagen filler standalone procedure (improvement of nasolabial folds, cheeks, fine wrinkles).

- Administered at 3-week intervals for a total of 3 sessions. Initial full-face treatment with 1cc for the first session, followed by half of the initial dosage for the 2nd and 3rd sessions.
- Maintenance of volume for over a year after the 3-session treatment, with sustained improvement in skin elasticity and tone even beyond the first year.
- Fundamental skin regeneration effects on collapsed dermal layers.
- Stimulation of collagen production.
