

XTREME FIRE WALL SYSTEM

At Tamlyn we don't believe in waiting for legislation to change in relation to out of date building regulations regarding fire proofing of buildings. We have been advocating A1 and A2 fire rated products from the start. Not just at height, but from ground level, and on any structure!

From our Xtreme Reflectaflame wall wrap, right through to the external façade we have been offering fire proof construction. Whether you need a fibre cement product like our Xtreme plank, or an aluminium panel, façade or dummy louvre product, they are all fire rated.

Our support products are galvanised steel or aluminium, and we have the best performing wall membrane regarding fire, breathability and head of water.

When it comes to fire safety , you cannot compromise your choice of products. It isn't worth the risk!
